

NIGHTWATCHER CUSTOMER CASE STUDY

CUSTOMER - SUN HEALTH FOODS

MODEL - NIGHTWATCHER HALOGEN (P/N NW1000B)

The Challenge

To eliminate all dark areas where security cameras are positioned. Current video footage at night is not clear enough to determine if security breach has occurred.

The Objectives

The main purpose of the project is to increase and implement lighting around the perimeter of the building. The new lighting has to be motion activated so the electricity costs are kept as low as possible.

The Solution

By installing a total of 7 Nightwatcher Robotic Security lights around the perimeter of the building, the lighting level is now sufficient for the security cameras to function according to their specifications.

With its 220 degree x 10 meter detection zone, the Nightwatcher only activates when this area has been breached. The Robotic light head will then turn on and rotate towards the intruder giving them the sense they are being monitored by security personnel.

Main Benefits

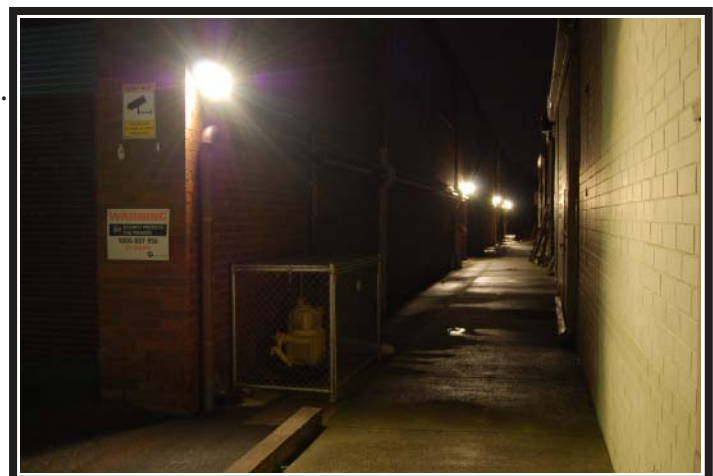

One Nightwatcher Security Light can light up 3 Areas with its Robotic light head, it now eliminates all dark areas around the premises. The 150W Halogen light head is triggered by the motion sensor which reduces running costs.

Results

Theo Andriopoulos of Sun Health Foods was very pleased with the final outcome by installing the Nightwatcher units.

"Security of the premises is now increased, I preferred the robotic light head rather than a fixed light. They are good and effective at night, all dark areas get lit up"

Theo Andriopoulos
